

# Specialist **VERRUCA CLINIC**

Effective pain free treatment to eradicate even the most persistent Verrucae and Warts

*Credit/Debit Cards Accepted*

*Accepted by HSA  
and other leading Insurers*

Our Specialist Verruca and Wart Treatments include the very latest proven technologies for the speedy and effective removal of even the most persistent of these unsightly and often painful viral infections.

## LASER TREATMENT

Our specialist medical grade Laser equipment has proven the most effective means of killing off this viral infection. It is used as our front line of attack particularly where Verrucae or Warts have resisted treatment from other over the counter and traditional products. Failure to respond to treatment is often caused by other underlying Verrucae protecting the resistant visible ones. Our Laser treatment is particularly effective at bringing these concealed ones to the surface where they can be eradicated.

Benefits of Laser treatment:

- ◆ Pain Free
- ◆ Ideal for Children
- ◆ Speedily treats wide areas of infection
- ◆ Permanent solution with very low recurrence rate
- ◆ Ideal for Mosaic and Cluster Verrucae
- ◆ Treatable to a wider range of Patients including Diabetics

## CRYOFLEX TREATMENT

For individual Verrucas and warts we use the latest CryoFlex equipment (shown in the front picture). We apply a gold tipped probe directly onto the verruca/wart. The probe is then rapidly frozen to a very low temperature, which is transferred through the verruca/wart to the root. The temperature is completely controllable and the freezing can be stopped instantaneously.

Conventional cryosurgery with liquid nitrogen can cause extreme discomfort is uncontrollable and may not get to the root of the verruca/wart. Our CryoFlex system is not only highly effective on suitable lesions but also much more Patient friendly.

## CLINICAL REMOVAL

Historically clinical removal has not been an option due to the high reoccurrence rates and unsatisfactory result of the use of a scalpel. At the MK Clinic we now have the very latest Radio Surgical equipment for precise clean excision of Verrucas. The Procedure is carried out under local anaesthetic and combined with our comprehensive after care and Laser treatment provides rapid healing and recovery with low reoccurrence and discomfort rates .

## TREATMENT COSTS

Treatments are subject to our standard session charges + an additional small charge for the treatment based upon the amount required. These charges range from £3 for Cryosurgery and from £5 for Laser. Clinical removal Prices including full after care sessions and are typically around £350.

We treat many Patients from single Verrucae to infestations of the whole foot. The combination of the latest modern equipment together with the skill of our team of Practitioners ensures an effective and speedy solution to this often resilient problem. Our treatments are suitable for use on both Verrucae and common Warts and can be applied to the hands, feet and facial areas where these problems occur. In addition we have solutions suitable for children and adults of all ages

All treatments are carried out by our team of fully qualified Chiropodists/Podiatrists and Foot Health Professionals.
